## BUGVAC TRIPLE ACTION FLYING INSECT TRAP

**BUGVAC™ FLYING INSECT TRAP** utilizes a highly effective and efficient **attract, kill** and **dispose** process.

**Attract:** Annoying flying insects are attracted to the front opening of the unit by a purpose designed **illumination system** consisting of a specially selected spectrum low wattage ultra-violet black light (6000 hours rated) and an inbuilt reflector.

**Kill:** As the insects are drawn to the light, a lethal down draft of air, from an **inbuilt fan**, propels them into a reservoir of water containing a few drops of a surface tension reducing surfactant (dish washing liquid) killing them quickly and cleanly by **drowning**.

**Dispose:** The dead insects are easily disposed of by removing the water reservoir tray by simply sliding it out from the main body of the **BUGVAC™** and emptying it on the garden or in a garbage receptacle.
